 quality is not important - this is throw-away-try-out-new-techniques material
4 smooth metal cookie sheets
 BORROW these, they will not be damaged and can be returned to kitchen use

CLASSROOM SET-UP

Hard floors are best for this class: We will be using textile paints that could be permanent on carpet. It is possible to tape down plastic around the paint tables if necessary.

Water Access: We will need to be able to wash out thermofax screens that are about the size of a notebook/binder. Some bathroom sinks are small enough to make this difficult. We can use plastic bins of water in the room to scrub the screens if necessary.

Teaching table: one table near a screen or wall on which to project live demonstrations. all students must be able to see the screen from their seat.
extension cord and power strip for Lyric's AV equipment

Supply/kit table: anywhere out of the way, for kits and extra supplies

Student tables: about 3' x 3' table space per student with a clear view of the screen/wall

Paint tables: 2 pushed together, raised if possible as students will work here while standing. Place them closest to water your source. Leave room to walk around tables easily.

Table for photo transfer: nearest the best air circulation, in hallway or outside if possible.
Citrasolv is an all natural orange based cleaning solvent that has a strong orange odor that can aggravate students with breathing issues.

Irons and boards: at least two, preferably four.

Surface Design Sampler Platter CLASSROOM SET UP

Surface Design Sampler Platter classroom set up

Please have the room set up at least 45 minutes before class begins. Call Lyric at 919-656-6398 with any questions.
